## EXECUTIVE SUMMARY

- Postgraduate in Statistics with strong hands-on experience in building AI-powered systems, automation workflows, and data-driven solutions using Python and modern AI tools. Skilled in developing AI chatbots, integrating AI APIs, and designing automation pipelines using APIs and workflow automation platforms. Experienced in translating business problems into practical AI and automation solutions that improve operational efficiency and support real-world business applications.

## WORK EXPERIENCE

### • Data Science with GenAI Intern

July 2025 - December 2025

RP2 Private Ltd

Ernakulam, Kerala

- Developed and integrated three interconnected AI features — a multilingual audio interview coach, a video-based confidence analyzer, and a context-aware question generator — into a unified edtech LMS platform under the guidance of senior engineers, managing containerized deployment of these components using Docker and CI/CD pipelines across development and staging environments.
- Built and deployed these multimodal AI systems (LLMs, speech, and video models) using embedding-level evaluation, automated drift monitoring, and model validation pipelines — reducing inference latency by ~30% and improving system reliability across real-time AI workflows within cross-functional Agile sprints.

### • Data Analyst Intern

April 2025 - June 2025

Nevar Systems

Puducherry, India

- Independently drove market analytics at an early-stage agricultural drone startup — conducting price research, competitor analysis, and demand trend analysis using Python and SQL, and delivering operational insights across drone coverage, flight efficiency, and sales indicators via Power BI dashboards, reducing manual reporting effort by ~20% and improving targeting precision by ~25%.
- Built a machine learning price and demand prediction system for agricultural drones using Random Forest and XGBoost regressors — engineering seasonality, region, and competitor pricing features from internal sales and external market data to forecast optimal pricing and monthly regional demand, evaluated via RMSE and MAE to support inventory and sales planning.

## PROJECTS

### • Multi-Tenant Agentic AI SaaS for Global Supplier Risk (AWS Deployed)

January 2026 - February 2026

Tools: [ Python, LangGraph, LangChain, MCP, LLM, AWS, Docker, FastAPI, Pydantic, PostgreSQL ]

- Built and deployed a production-grade, multi-tenant Agentic AI SaaS platform on AWS (EC2, S3) that reduced global supplier due diligence from 3–5 days to <5 minutes (~ 96% cycle-time reduction) using a 5-agent LangGraph orchestration workflow and 4 MCP tool layers, integrating RAG (619 compliance chunks, HuggingFace 768-dim embeddings + Qdrant), sanctions screening (6,000+ entities), registry/news APIs, structured risk scoring, and audit-ready AI decision outputs.
- Engineered full-stack cloud-native infrastructure with FastAPI, PostgreSQL, Redis, MinIO, Qdrant, JWT-based 4-tier RBAC, rate limiting, and centralized LLM token-level cost tracking, enabling secure multi-tenant isolation, role-based system governance, database-integrated intelligence pipelines, and ~ 80% AI cost optimization in production SaaS deployment.

### • Production-Grade AI Agent Orchestration & RAG Automation Platform

September 2025 - September 2025

Tools: [ n8n, Google Gemini, Veo 3, OpenAI Embeddings, Supabase, REST APIs, OAuth2, JSON, Webhooks ]

- Architected and deployed 4 production-ready AI automations in n8n enabling multimodal agent workflows across image editing, video generation, document intelligence, and personalized content creation; integrated Telegram interfaces, external LLMs, vector retrieval, and API orchestration to convert unstructured inputs into reliable, repeatable machine-driven actions.
- Engineered end-to-end agent pipelines including event triggers → preprocessing → tool invocation → LLM reasoning → evaluation → delivery, implementing Supabase vector search with OpenAI embeddings, Gemini/Veo generation, and Gmail drafting; improved response relevance, reduced manual effort, and enabled rapid experimentation in ambiguous, fast-iteration environments.

### • MediBot – Medical RAG Chatbot (AWS | Pinecone | LangChain | OpenAI)

September 2025 - October 2025

Tools: [ Python, Pinecone, LangChain, AWS, CI/CD Pipeline ]

- Built and deployed a production-grade RAG-based medical chatbot enabling symptom-to-diagnosis Q&A over a 700+ page clinical PDF corpus using LangChain, Hugging Face embeddings, Pinecone vector DB, and GPT-4o; achieved ~92% retrieval accuracy with <1s average latency.
  - Engineered scalable data ingestion, chunking, embedding optimization, and Flask API deployment on AWS EC2 (Docker + CI/CD), reducing manual deployment effort by ~60% and enabling reliable end-to-end production hosting.
- **AI-Powered Multilingual Voice Interview Trainer** July 2025 - August 2025  
Tools: [Python, OpenAI Whisper, GPT-4, Flask, PyTorch, MFA, nara-wpe, PyMuPDF, FFmpeg, pyttsx3] [🔗]
    - Built a multilingual, voice-based AI interview preparation platform that generates dynamic, context-aware questions across 4+ interview types using GPT-4, conditioned on 5+ structured inputs (e.g., job title, job description, resume) with role-specific difficulty scaling to simulate real interview scenarios.
    - Engineered a live/recorded evaluation system supporting 3 languages (English, Malayalam, Kannada) with a 5-stage audio preprocessing pipeline leveraging Whisper language detection, GPT verification fallback (>95% transcription accuracy), and MFA phoneme-level alignment for AI-driven feedback on audio delivery and answer quality.
- **AI-Powered ESG Report Analyzer | LLM-Based Automation Tool** April 2025 - May 2025  
Tools: [GPT-4o-mini, PyMuPDF (fitz), Tesseract OCR, spaCy, Streamlit] [🔗]
    - Automated multilingual ESG report analysis across 1,000+ pages and 10+ languages using GPT-4o-mini, Tesseract OCR, and spaCy — mapping 100+ ESG needs to 20+ service categories, reducing manual review effort by ~80%, and enabling 5× faster batch processing with structured compliance-ready Excel/PDF outputs via a production Streamlit UI.
- **Full-Stack LLM System for Instant Context-Aware Question Generation** November 2025 - November 2025  
Tools: [Python, FAISS, Few-Shot Prompting, RAG, Node.js] [🔗]
    - Built a RAG-based LLM system that auto-generates context-aware questions from PDF/DOCX content using FAISS vector search, semantic chunking, and Few-Shot prompting — achieving 4× higher content coverage and ~98% structural correctness while reducing manual content creation effort by 90%+ through a real-time web interface.

## EDUCATION

- **Pondicherry University** September 2023 - June 2025  
M.Sc. Statistics Pondicherry, India
  - CGPA: 8.34/10.00
- **Hindu College, University of Delhi** August 2020 - July 2023  
B.Sc. (H) Statistics Delhi, India
  - CGPA: 8.49/10.00

## SKILLS

- **Programming & Core Tools:** Python, R, SQL, Node.js, Git, GitHub
- **Machine Learning, Deep Learning & GenAI:** Supervised & Unsupervised Learning, PyTorch, TensorFlow, Keras, Scikit-learn, LLMs, RAG, LangChain, LangGraph, Agentic AI, Prompt Engineering, NLP, Computer Vision, Fine-Tuning, OpenAI API, Anthropic Claude API
- **Automation & Workflow Orchestration:** n8n, Make, Zapier, Workflow Automation, Trigger-Action Pipelines, API-Based Integrations, System Testing
- **MLOps, Cloud & System Engineering:** Docker, CI/CD Pipelines, FastAPI, Flask, REST APIs, Microservices, Webhooks, API Integration, JWT Authentication, RBAC, System Design, AWS, MCP
- **Databases:** PostgreSQL, MySQL, NoSQL, Redis, Pinecone, Qdrant, FAISS, Database Design
- **Data Science & Engineering:** Statistical Modeling, Hypothesis Testing, Model Evaluation, Pandas, NumPy, Matplotlib, Seaborn, Power BI, ETL Pipelines, Data Integration, Data Transformation

## CERTIFICATIONS & VIRTUAL EXPERIENCE

- **Claude with the Anthropic API - Anthropic** March 2026
- **Deep Learning for Developers - Infosys** August 2024
- **Data Analytics with Python - IIT Roorkee** May 2024
- **Data Analytics and Visualization - Accenture** May 2024
